The screenshot shows the SHEBANQ web application interface. At the top is a navigation bar with the logo 'SHEBANQ' and links for 'Home', 'The Text', 'Words', 'Queries', and 'Help'. A 'Log' link is also visible on the right. Below the navigation bar is a 'My Queries' dropdown menu with 'Public Queries' selected. The main content area displays a hierarchical tree of queries. The tree is expanded to show a folder named 'Reinoud Oosting(4)' which contains four queries: 'To fight + against in Isaiah', 'Repetition of imperative in Isa 40:1', 'HNH+J with perfect in Isa 28:16', and 'Incongruency in Isa 1:10'. Below this is another folder 'Test Project (40)' and a folder 'Reinoud Oosting(3)' which contains three queries: 'How many H of directions in the OT', 'How many verses in the OT?', and 'Kindness and Truth'. The query 'How many verses in the OT?' is highlighted in pink and has a checkbox next to it that is checked. To the right of the tree is a 'Filter' section with a search box containing 'Reinoud'. Below the search box are three buttons: 'all matches', 'in queries only', and 'back'. Below the 'Filter' section is a 'Level' section with five buttons: 'organizations', 'projects', 'users', and 'queries'. The 'organizations' button is highlighted in blue. Annotations with yellow arrows point to various parts of the interface: one points to the 'Public Queries' folder in the tree; another points to the 'Reinoud Oosting(4)' folder; a third points to the 'How many verses in the OT?' query; a fourth points to the 'back' button; a fifth points to the 'organizations' button; and a sixth points to the 'How many verses in the OT?' query again. A separate annotation points to the 'Public Queries' folder in the tree.

The screenshot shows the Query Developer View interface. At the top, there's a header with a checkmark, a file icon, and the filename 'q531.csv' with a 'chart' button. Below this is a red error box containing four messages: '1. Symbolchecking failed with compiler error', '2. The enumeration constant Ximpv does not exist', '3. in the enumeration of the feature.', and '4.'. Below the error box, there's a green box that says 'Query executed' and 'The stored query results are up to date.'. Below this, there's a section for 'Public:' with a checkbox and a 'Name:' field containing 'Double imperatives'. Below the name field is a 'Description:' field containing a markdown snippet: '# Finding the right context', 'This is a variation on [Reinoud Oosting: Repetition of imperative in Isa 40:1] (http://shebanq.ancient-data.org/hebrew/text?lid=530&mr=r&qw=q) which provides the context "hook" for two consecutive clauses.', and an 'MQL Query:' field containing 'select all objects where'. At the bottom, there are buttons for 'Reset', 'Save', 'Execute', and 'Done'. Arrows from the surrounding text blocks point to various parts of the interface: 'Query developer view' points to the top header; 'Watch the error messages from the query engine' points to the red error box; 'Query results will be updated after succesful execution. In that case you will see this instead.' points to the green 'Query executed' box; 'Publish if you are content with the query. Public queries show up in the sidebar, if the results are up-to-date.' points to the 'Public:' checkbox; 'Help others understand your query by writing in mark-down' points to the 'Description:' field; 'Edit the query body' points to the 'MQL Query:' field; 'Use docs for query writing' points to the 'docs' link in the bottom left; 'Just save' points to the 'Save' button; 'Save and execute' points to the 'Execute' button; 'Back to last saved' points to the 'Reset' button; and 'Back to normal layout' points to the 'Done' button.

Charts show you where in the Bible the occurrences and hits are

Back to the word or query you came from

Every **cell** corresponds to a block of 500 words. Clicking it leads you to it. **Hover** to see the chapter range and the amount of hits/occurrences

The **color** in the cell indicates the *absolute* number of hits/occurrences in that chapter

Last blocks of a book have lesser size. The size is indicated in a tooltip (%) and the block is marked with = (< 25%) or - (between 25% and 75%)

Chapter ranges:
23.Z = chapter 23, last word
23.z = chapter 23, at position >95%
23.6 = chapter 23, at position 60%
